DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-2, 4-9, 11 and 13 are rejected under 35 U.S.C. 102(b) as being anticipated by Livingstone 3494496.

With regards to the intended use recitation of a mixing chamber, it has been held that a recitation with respect to the manner in which a claimed apparatus is intended to be employed does not differentiate the claimed apparatus from a prior art apparatus satisfying the claimed structural limitations. *Ex parte Masham*, 2 USPQ2d 1647 (1987).

A container assembly 12 (a bottle) comprising: a base (bottom of bottle) having an inner wall 12 defining an upper surface and a chamber in the bottle for holding the materials; a cover 6, figures 1 and 3, having an outer periphery and being selectively mounted to said base 12 covering said chamber and being removable from said base exposing said chamber; and a sealing portion 9, figure 9, depending from said cover and engaging said upper surface 15 of said inner wall when said cover is mounted to said base; said sealing portion being at least partially flexible and angled outwardly (figure 3) toward said outer periphery such that during said engagement of said sealing portion with said upper surface, said sealing portion flexes and conforms to said upper surface to seal said mixing chamber for preventing an escape of material from said mixing chamber, column 3, lines 59-75.

Art Unit: 1723

With regards to claim 13, note there is a seal 41, 51 in figures 7 and 9, disposed between said cover 5 and said top surface of said base 12 when said cover 5 is mounted to said base.

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over Livingstone 3494496.

Livingstone discloses all of the recited subject matter as defined within the scope of the claims with the exception of the sealing portion 9 (figure 3) is angled outwardly toward said outer periphery from 0.5 to 20 degrees. Livingstone shows an angled outward direction of the sealing portion 9 however does not point out the particular angle of the outward direction. It is noted that the angle of the slope of the sealing portion would provide an effective engagement to the inside of the wall of 12, and since it has been held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum or workable ranges involves only routine skill in the art. In re Aller, 105 USPQ 233. Accordingly, it is deemed that it would have been obvious to one of ordinary skill in the art to modify the slope of the angle of the orientation of the sealing portion 9 to the range of 0.5 to 20 degrees so as to provide an effective engagement of the seal to the inner wall surface.

Allowable Subject Matter

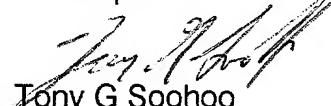

3. Claims 10, 12, 14-22, are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
4. Claims 23- 50 are allowed.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The following disclose locking devices for containers: Cruz 4449984, Metivier 3433385, Miller 1596367, Wobster 5135124, Copperfield et al 663866, Russell 4792087, Hopkins 2257715. The following lids for mixing containers: Stallings 5199788, Hollenback 2453914, Larsen 5676463 and Kroeger 3704007. The Schellenbach 6338414 reference teaches another example of an outward seal member for a bottle.
